Antler
hard antler
velvet growth (living)
mineralized, dead antler
(a) Living target tissue available
pedicle only
pedicle and growing tip
pedicle only; beam is dead
(b) Intensity of agonistic contact
schematic: heights are qualitative
velvet-period rank contacts
rut
(c) Lesion to living tissue per interaction
not measured in free-living animals
no living tissue exposed
(d) Damage recorded in the source studies
surgery, accidents (captive)
hard antler, eye, leg (wild)
solid = recorded in free-living or rutting animals; dashed = experimental or captive reports; hatched = no measurement exists.
Timings are approximate and synthesised from the cited studies; no row shows measured seasonal rates.
